

Mission-Critical Security for Modern Data Centers

Minuteman Security & Life Safety delivers integrated enterprise physical security, technology services, and PMO excellence for data centers that cannot afford downtime. From hyperscale new builds to fast-growth regional operators, we can help you deploy on-time, stay compliant, and scale with confidence.

Why Data Centers Choose Minuteman

Your Partner for On-Time, Compliant, Scalable Delivery Data centers operate on unforgiving timelines. Minuteman brings the workforce, standardization, and mission-critical operational expertise to deliver security solutions that work flawlessly from day one — and stay reliable for the long term.

Our Competitive Advantages

-  **31 offices and 500+ employees**, enabling coverage in top data-center regions
-  **Proven mission-critical delivery track record** across energy, infrastructure, and complex multi-site environments
-  **Expertise at the intersection of data centers and the power systems that sustain them**
-  **SOC 2 Type II certified** operations for secure handling of systems and data
-  **100+ technology partners**, ensuring platform flexibility and standardization options
-  **NERC CIP experience across 2,000+ regulated sites**, institutionalized in our methods
-  **Security + Enterprise Technical Solutions (ETS) + Project Management Office (PMO) under one roof**, reducing GC coordination and project friction
-  **Deep understanding of enterprise-grade design requirements**

What We Deliver

Integrated Security Built for Scale

We design, install, program, and maintain full-stack security architecture for data centers, including:

- **Access Control** with multi-layer enterprise credentials, SOC design, building, and integration, multi-facility standardization & systems integration, and/or biometric options (including facial and IRIS recognition).
- **Video Surveillance** with enterprise system design and implementation, integration with other systems in the enterprise, including the SOC, and can incorporate AI-analytical technologies, including rapid forensic investigation tools.
- **Perimeter Security** with license plate recognition (LPR) and integration to other security systems, thermal & IR detection, vehicle barriers integrated with your access control as well as outdoor intrusion AI analytics.
- **Intercom & Emergency Communications** with unified communications across all facilities, visitor management, emergency alerting as well as custom integrations for perimeter & barrier control.

More Than Cameras & Card Readers

Specialized Mission-Critical Teams

Your operational resilience depends on more than hardware. Minuteman provides dedicated teams to ensure long-term uptime, standardization, and compliance.

Program Management Office (PMO)

Certified PMO specialists who help create and drive standardization across domestic and international data-center sites.

Technical Services Group (TSG)

Cybersecurity, software expertise, coding skills, data services, custom integrations, and engineering audits.

NERC CIP Compliance Team

If your facility includes a substation, we ensure security systems meet NERC CIP-014 standards, backed by experience across 2,000+ regulated sites.

24x7x365 Managed Services (HMS)

Proactive system monitoring, configuration management, and user support to keep your environment running.

Markets We Serve

We support emerging, mid-tier, colocation and hyperscale operators

Our goal is simple: to become your reliable and consistent full-service systems integrator in the regions where you're scaling fastest.
